## The New Misting/CAFS Vehicle Mounted System

The System has been designed for extinguishing all types of fires while only using small quantities of water.

The system can work in two modes:

- **Water Mist**
- **Water Mist with foam additive**

**Water Mist mode** – water is a 100% environmental friendly extinguishing medium and by utilisation of water mist technology allows to fight almost all classes of fires including: **A, B, C, E and F-class fires !!!**

Main advantages of **Water Mist**:

- **Rapid extinguishing**
- **Water saving**
- **Safe for use on or around humans & animals**
- **Safe on electrical fires**
- **Minimal collateral damage / no flooding risk**
- **Superior cooling**
- **No thermal shock**
- **Safe for the user due to mist barrier between fire and operator**
- **Environmental friendly**

# Angloco

**Water Mist with foam additive** – to increase firefighting capabilities there is an option to use foam or wetting agent. The biggest advantage of using this option is that re-ignition will be suppressed.

When the foam is switched on it works like traditional CAFS system but with extra option of foam in the mist which allows smarter use of the extinguishing agent.

**Mist-Jet Branch** - has two operational modes:

- **Mist Mode** – unique mist properties in both: water only and foam mode
- **Jet Mode** – which gives a straight stream option for water or foam
